Re: Application for Permit No. 63-33344

Dear Director of Department of Water Resources:

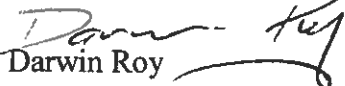

We are very concerned and strongly oppose the approval of the above noted application, and feel that if approved, could have a negative impact on existing wells in the area. The below addresses several points that we believe DWR should take into consideration when reviewing this application.

- The lack of data regarding the aquifer and its ability to recharge from the significant proposed increase in use. Some wells in the area show decreased levels when measured over time and there is a lack of data showing potential impacts to existing water users
- The lack of data regarding the cumulative impact of all the proposed developments for the area which represents use on the level not ever seen in that area
- DWR memos (such as "Evaluation of SPF Report Entitled Ground Water Supply Evaluation for the Mayfield Townsite Property") indicating that there is a significant amount of uncertainty regarding the water resources in the area and the ability of the aquifer to recharge. These same memos indicate that the water resource may have already been fully allocated with the approval of water right 63-32225

Regards,

Lori Atkins
